Deploy Endpoint Verification to use with certificate-based access

As part of a Chrome Enterprise Premium solution, Endpoint Verification provides critical device trust and security-based access control, and can help enforce fine-grained access control on your Google Cloud resources.

For more information about Endpoint Verification, including how to install it, see [Endpoint Verification overview](#) (/endpoint-verification/docs/overview).

If you are installing Endpoint Verification for the first time, we recommend installing the latest version. The following versions of Endpoint Verification are required to use certificate-based access:

- Endpoint Verification Chrome Extension: 1.0.38 or later
- Native helper: 0.4.40.0 or later for Mac, 0.4.36.0 or later for Windows, and 20191007 or later for Linux
